Half-Life • The “half-life” (h) is the time it takes for half the atoms of a radioactive substance to decay. • For example, suppose we had 20,000 atoms of a radioactive substance. If the half-life is 1 hour, how many atoms of that substance would be left Jan 18th, 2022

Chapter 19 Radioactivity and Nuclear Energy
1. The nucleus of an atom has little or no effect on the atom's chemical properties. The chemical properties of an atom are determined by the number and arrangement of the atom's electrons (which are outside the nucleus). 2. Jun 12th, 2022.

CHAPTER 19: RADIOACTIVITY AND NUCLEAR ENERGY
CHAPTER 19: RADIOACTIVITY AND NUCLEAR ENERGY INTRODUCTION
Most chemical properties depend on the arrangement of electrons, and many chemical reactions involve the transfer of electrons from one atom to another. But the events and reactions described in this chapter depend on the properties of the nucleus of an atom. The best known example is the glow-in-the-dark paint used in the dials of World War II aircraft. We therefore begin our study of nuclear physics with the discovery and basic features of nuclear radioactivity. Figure 31.2 shows the dials of this World War II aircraft glow in the dark, because they are painted with radium-doped phosphors.

Binding Energy and Nuclear Forces
The force that binds the nucleons together is called the strong nuclear force. It is a very strong, but short-range, force. It is essentially zero if the nucleons are more than about 10-15 fm apart. The Coulomb force is long-range; this is why the nucleus is held together.

Chapter 17 Radioactivity and Nuclear Chemistry
17.2 The Discovery of Radioactivity: Antoine-Henri Becquerel • In 1896, French scientist, Antoine-Henri Becquerel (1852-1908), discovered radioactivity. • Becquerel hypothesized that invisible emission of X-rays was associated with the visible greenish glow of phosphorescence. • To test his hypothesis, Becquerel placed crystals of a uranium salt on top of a photographic plate wrapped in black paper. The plate was exposed to light for several days, and then developed. The plate showed a dark spot where the crystals had been. This was the first discovery of radioactivity.

Ch. 20: Radioactivity and Nuclear Chemistry • Antoine-Henri Becquerel discovered radioactivity accidentally while studying X-rays and phosphorescence (the “glow” in “glow in the dark”).
I. Introduction • Crystals of potassium uranyl sulfate were used to try and prove that phosphorescence occurred with X-ray emission. May 18th, 2022.
